SUMMARY

I build backend systems across mobility, geospatial, and healthcare. At Lyft, I shipped rider products for older adults and teens and now work on the backend bringing the app to Europe. At SkyWatch, I built enterprise org management APIs for a satellite imagery platform. At GE Healthcare, I built event-driven microservices on AWS for medical imaging workloads.

SKILLS

- Languages: Python, TypeScript, Java, SQL, Go
- Data and storage: PostgreSQL (Amazon RDS), DynamoDB, OpenSearch
- Distributed systems: AWS Lambda, API Gateway, SQS, SNS, ECS, EKS and Kubernetes, microservices, gRPC
- Practices: REST API design, system design and design reviews, data consistency and idempotency, multi-tenancy and entitlements, on-call, SLOs and alerting, incident response and postmortems, pytest, JUnit, GitHub Actions CI/CD

EXPERIENCE

Software Engineer IV

Lyft | Toronto, Ontario | 2024 to present

- Build the roaming backend behind Lyft's European expansion: ride creation, payment authorization, scheduled rides, notifications, tipping, and receipts across the FREENOW network
- Owned the access-control foundation for Lyft Teen ahead of launch in 200+ US markets
- Shipped growth and support surfaces for Lyft Silver: invites, gift cards, trusted contacts, and a CMS-backed contextual help API
- Rolled out agent coding standards across ten backend repos with a published before/after eval, and co-built the operational-health dashboard now used across the org

Software Engineer II

SkyWatch | Ontario | 2022 to 2024

- Led enterprise org management APIs (orgs, membership, roles, and access) at SkyWatch, a satellite imagery platform used by Microsoft Azure, Al Jazeera, etc., contributing to a 40 percent increase in sales
- Modeled enterprise contract terms and usage entitlements so per-customer quotas and permissions were enforced consistently across services
- Redesigned the geospatial search REST API, cutting average response time from 180 ms to 45 ms, a 75 percent reduction

Senior Software Engineer · Software Engineer · Edison Engineer

GE Healthcare | Bangalore, India | 2017 to 2022

- Built event-driven backend services for medical device and imaging workloads on AWS, using SQS and SNS with DynamoDB and OpenSearch
- Built and deployed Python and Java microservices on AWS (ECS, EKS) for production healthcare workloads, including the backend for a DICOM medical image viewer
- Owned system design end to end: requirements, UML diagrams, API documentation, and Technical Design Reviews with architects across the organization
- Built a metrics visualization dashboard backend in Java and Spring Boot; wrote pytest and JUnit coverage; mentored junior engineers

EDUCATION

Master of Science, Software Engineering - Pennsylvania State University

Bachelor of Engineering - University of Pune, Pune, India
